

Parents of 5th Grade Students

New Jersey requires all children turning eleven, and entering sixth grade to have the meningococcal (Menactra) and Tdap vaccines. The CDC reports that as children get older, protection provided by some childhood vaccines can begin to wear off. Tdap is an improvement to the old Td booster because it adds protection from whooping cough which may be life threatening to infants. Please upload your updated immunization record to your child's magnus profile prior to the start of the new school year.
